(I)   The German artist Albrecht Dürer is often discussed side by side with the great Italian painter Leonardo da Vinci. Both of these men were born during the fifteenth century and died fairly early in the sixteenth century. Like Leonardo da Vinci, Dürer was highly skilled at painting and drawing, and like Leonardo da Vinci not only learned the traditional painting and drawing methods but also developed them further. Both men had other important interests as well. Dürer studied mathematics and developed theories about its relationship with art; Leonardo da Vinci created magnificent sculptures and used his knowledge of mechanical principles and engineering to design fascinating devices and machines for both civil and military use.

Like Leonardo da Vinci, Dürer was also deeply fascinated with nature. Both Leonardo da Vinci and Dürer chose subjects from nature for many of their works of art. Dürer studied animals before including them in his drawings and paintings, and so did Leonardo da Vinci. In Leonardo's works, the animals' individual muscles are clearly shown. In Dürer's drawings, even the individual hairs on the animals' bodies can be seen. This feature of Dürer's art greatly influenced other artists of his day.

Dürer and Leonardo da Vinci differed in important ways as well. Unlike Leonardo da Vinci, Dürer demonstrated a deep interest in human psychology. This is clear from the many self-portraits that he drew and painted at different times during his lifetime. In each one, he reveals something different about himself. Leonardo da Vinci, on the other hand, focused on understanding the world around him and representing it in his works of art.

Judging by their art, Dürer was also more interested in religion than Leonardo da Vinci was. Many of Dürer's subjects are religious. The most famous example is his painting of praying hands. He also drew and painted people and scenes from the Bible. In addition, Dürer actively supported religious leaders of his time. His popular drawings of religious subjects were widely printed and distributed throughout Germany. They helped to fuel a religious movement that eventually spread throughout Europe and the world.

89.   What can be inferred from this article?

  (A) Dürer is less famous than Leonardo da Vinci.

  (B) Religion doesn't feature as much in Leonardo's works.

  (C) Leonardo da Vinci and Dürer admired each other's works.

  (D) Paintings of these two artists are often exhibited side by side.

90.   According to the article, both Leonardo Da Vinci and Dürer _____.

  (A) were born during Renaissance and were fascinated in nature

  (B) failed to pass their artistic skills to future generations

  (C) liked to study mathematics and design devices for military use

  (D) used profits from art to obtain much material wealth

91. Which of the following statement about Dürer is **False**?
    (A) He drew and painted people and scenes from the Bible.
    (B) He demonstrated a deep interest in human psychology by portraying himself.
    (C) His popular drawings of religious subjects helped to fuel a religious movement.
    (D) In his arts of works, even the animals' individual muscles are clearly shown.

92. Linda is attending a museum's guided tour on Dürer's works. Which of the following is she most likely to hear from the guide?
    (A) This is a sketch of a machine he designed for military purposes.
    (B) The arrangement of the body parts displays mathematical precision.
    (C) Animals are a rare subject of his paintings.
    (D) This is a portrait of a priest whom he supported of his time.

(II) A group of researchers from Feng Chia University, Taiwan, were interested in the Mazu Pilgrimage. They employed GPS technology to keep a record of the path of the pilgrimage from 2008 to 2010 and investigated the total walking distance covered each day. Conventionally, over a period of nine days and eight nights, the pilgrims depart from Taichung, moving southwards to Chiayi during the first three days to attend a blessing party on the fourth day. Then they depart on their journey back to Taichung. The research results showed that the total walking distance ranged from 280 to 330 km each year. Interestingly, in 2010, when 27 more temples joined in and one more day was added to the journey, the total walking distance didn't significantly increase. Instead, the team spent more time at temples along the route and slowed down their speed in the last four days. In all the years, the longest daily walking distance fell on the second day. On that day, the sedan chair always passed Changhua, where one third of the temples visited on the pilgrimage were located. The second longest walking distance fell on the fifth day, probably because the pilgrims had gained more energy from resting on the fourth day. These research results shine light on the traditions of the Mazu Pilgrimage and provide useful information for future pilgrimage planning.

93. According to the passage, which of the following is **NOT mentioned**?
    (A) The number of days pilgrims walked in 2012
    (B) Where the team of researchers are employed
    (C) The average distance walked by pilgrims from 2008 to 2010
    (D) The starting point and duration of the Mazu Pilgrimage

94. According to the passage, which of the following sets of numbers best describes the research results from 2010?

Daily walking distance of the MAZU Pilgrimage in 2010 (km)
